Subject: RE: a few more questions on Blades

Lorie,

Has Dupont been considered as a potential source (RCRA said there is a nearby Dupont facility)?

- 1) Yes, I looked at the site and did a full document review. The Dupont site is across the Nanticoke River in the Town of Seaford. The facility did produce nylon at one point, but any contamination would not be able to travel under the river and upgradient into the groundwater/drinking water. I excluded the Dupont facility during the Pre-CERCLA screening process because contamination in the Town of Blades would not be possible.

Was there an EPA removal action in 2018?

- 2) EPA completed a removal action after PFAS was identified in the public well in February of 2018. EPA's contractors sampled 56 private wells and the three public wells.

Was Blades ever NFRAPed or OCA?

- 3) The Blades Groundwater Site was never NFRAP'ed or placed in OCA status. I created the new site in SEMS in 2017.

Did the state conduct the RI?

- 4) Yes/No, The Procino Plating site was a PRP lead RI under the States VCP. EPA had the site in OCA status to oversee the remediation of the metals contamination.

No, The Peninsula Plating site was remediated under EPA's Removal Program after the facility was abandoned with plating chemicals unsecured on the site.

Subject: FW: a few more questions on Blades

Connor,

Can you answer these questions and send back to me?

Thanks!

Lorie

Subject: a few more questions on Blades

Hi Lorie,

These came out of our pre-brief on the site assessment process.

1. Has Dupont been considered as a potential source (RCRA said there is a nearby Dupont facility)?
2. Was there an EPA removal action in 2018?
3. Was Blades ever NFRAPed or OCA?
4. Did the state conduct the RI?

Thanks.

Terry
